

THANK YOU . . .

. . . for your inquiry. We are enclosing a copy of our Bausch & Lomb Multi-Films brochure.

A look at pages 4 through 6 will acquaint you with the nature and uses of Multi-Films and our production capabilities in this field.

Because the majority of our coating work is done on a custom-order basis, the only prices listed in this booklet are for the Class 6 Fabry-Perot Type I Interference Filters and the Class 8 Neutral Density Filters. Two and four-inch square samples of Classes 1, 2, 3, 4, and 5 coatings are available in small quantities; prices will be furnished upon request.

Many new applications are being found for multi-films, in solving problems which have previously been difficult or impossible to solve by other methods. There undoubtedly are many more problems which can be easily solved through the use of multi-films. Perhaps yours is one of them. If you think so, we would welcome the opportunity to discuss it with you.

Sincerely,

Nelson Woehrle
